
Bullets for Events

Posted by knowbase - 2008/07/29 01:45

Is there any way you can insert bullets into the Events list? Similar to the ToDo list.

You would have to edit the skin for this. There are instructions in the Rainlendar's help file how to extract the contents from the skin archives and how to edit them. In your case you need to edit the eventlist.xml file and the categories in the elements.xml. Just check what is different in the todolist.xml and make the same changes to the event list too.

I don't see the Help file anywhere. Which folder is the eventlist.xml file in? I think the files are already extracted, though I am not certain.

Right click on the calendar and choose help from the context menu. The xml files are inside the skin file.

This skin is an .ini file not .xml. :(
