
registration problem

Posted by rumpel - 2006/10/28 16:56

hi,

I've buyed your software today.
Have downloaded my license-file und have installed the License-File.
But the Rainlendar, write although UNREGISTERED!!
Could exist a problem with my name? Because this contains a ü.

In german a Umlaut!

My question, where is the problem?

Thx a lot

Greets

Rainer

Yes, the foreign characters caused problems. I had to change it so that now they are stripped from the name. I'll try to implement a better fix for it.

i have tha same problem as the german guy, every event is unregistered and i think therefor the server part isn't working.
in my name there is this letter š.
what shell i do now?
