
modifier strings in Rainmeter Plugin WebParser

Posted by tompooh - 2008/08/17 14:39

Hi,
since the original Rainmeter-Forum is closed, I hope to get support by this board!

I'm looking for a method to find/replace a string, got with RegExp using the Rainmeter Plugin "WebParser.dll".
The found string is a new URL, e.g. <http://webpage.com/week15/picture.png>. This should be changed to <http://webpage.com/week14/picture.png> or e.g. <http://webpage.com/monday/picture.png>, should be changed to <http://webpage.com/sunday/picture.png> and will again be used to parse that webpage in a new MeasureURL.
I already tried using `Substitute="15":"14", "Monday":"Sunday"`, but this has no effect on the original string.

Here is a part of my skin:

```
Measure=Plugin
Plugin=Plugins\WebParser.dll
Url=#URL#
RegExp="(?siU)"
Substitute="Monday":"Sunday", "15":"14"
```

```
Measure=Plugin
Plugin=Plugins\WebParser.dll
Url=#URL##PATH#
StringIndex=1
Download=1
FinishAction=!RainmeterReDraw
```
