
Manager Dates

Posted by mjp8309 - 2006/11/15 18:25

:whistle: I'm not a programmer , but how do you change the date format to day/month/year (**/**/****). It is currently showing month/day/year. I just updated rainlendar from an older virsion.

It's a bug in the current version. The manager uses always the format defined in the locale instead of what the user has defined.

:) Thanks, so it can't be changed at this time. We have to wait for a bug fix ?
