
Where are .r2skin files

Posted by Fafa007 - 2006/11/16 12:03

Hi,
When I download a skin file from www.customize.org, I only get a .ZIP file, which does not contain any .r2skin file :blink:
(but only .png or .ini files)
Where can I find the skin install file r2skin ?
Thanks

I don't think there are any available yet.

I've found that renaming the file extension will only cause errors. Is there a skin conversion tutorial? or at least some documentation on the new skin extension and what can be done with it?

Nope. I haven't had time to write any documentation yet.

Chaosmeika -

The .r2skin files are really just ZIP archives. R2 will also recognize the unzipped folder, which makes editing a lot easier (sorry if I'm pointing out something that may have been obvious to you).
