## Lost events when updated lite version

---

Should I have backed up something before installing the latest version?

Well, it is a good practice to backup your data when upgrading. However Rainlendar's installer does not overwrite your events or settings so that's not mandatory. If you cannot see your events anymore in Rainlendar after upgrade usually this happens because you installed the portable version over a normal installation. If that's the case you can just rename the rainlendar2.ini file in C:/Program Files/Rainlendar2 so that the application will use it again from the old location.

That worked. Thank you so much. I realize now that I did check the portable version for some strange reason.

Love this program. LOVE IT!

If that's the case you can just rename the rainlendar2.ini file in C:/Program Files/Rainlendar2 so that the application will use it again from the old location.

Please be more specific. I renamed the file as "rainlendar2.ini" and that did not solve the problem.
