
ToDo List size

Posted by knowbase - 2008/09/08 03:25

i'm making an old skin and for the ToDo list, I can't change the width of the window. When I insert a background image, the image is stretched to be the width of the window but I want to make it bigger. How do you fix it?

You can define the width of the window with TodoW.

That's what I have, but it's still not working. :(

Can you give a link to the skin? I tried the TodoW with some old skin and it was working the way it is supposed to.
