## Variable in \"to do\" message

Posted by denmarks - 2008/09/10 09:58

---

I would like to be able to add the number of days left in a "to do" message. Is that even possible with scripting? Is scripting separate from creating skins and where can I learn it?

=====

It's not (yet) possible with the scripts.

A good place to start to learn about the scripts is the lua's homepage: <http://www.lua.org> and the lua wiki: <http://lua-users.org/wiki>

The Rainlendar specific stuff can be found from the help file and by looking at the existing scripts.
