
Rainlender disappears after download

Posted by tulsigirl - 2006/11/18 10:36

I have downloaded Rainlender twice into my new Dell Athalon Dual-processor computer. I am running Windows XP and IE7. It will show up on my desktop. I can go into settings and do my settings. Then if I close anything or close down my system - it disappears. It is not in Add/Remove programs nor can I find it by doing a search. What is going on. I think it is just what I am looking for...

What exactly did you download? The installer or just a zip package?

I have no idea. I just went to the download page and downloaded it. It appeared on my desktop and I played with it and it all seemed okay. When I brought the computer up the next day it was gone. I re-downloaded it and it appeared again on my desktop. However, disappeared after a while. I then did a "search" and it showed up no where on the search files.

Sorry it took so long to get back to you. I missed it in my emails.
