
How to download a file from internet?

Posted by ericsu9168 - 2008/09/20 22:01

We try to share a file with friends, and intend to use Rainlendar to update the file during a period automaticaly.

Rainlendar_Download is only returned as a string. How can I save it to a file? or Does Rainlendar have any API which can let me download the file from internet and save to my path and give a file name to it?

Please advise.

TKS!!

Eric Su

You should be able to use the Lua IO Library to save the contents to a file.
