## Pro Version and [Unregistered] Text

---

Hi,  
I'm new in using desktop and online calendars.  
So I tried the actual version of Rainlendar2 v2.4b65/64 downloaded today.  
I want to use it with Google online calendar.  
In the try-phase (before purchase) I have the text in front of every event.

But:  
will I have, after purchasing Rainlendar2 Pro, every event doubled too, like now?  
(I want to use local calendars as well as my Google online calendar!)

I hope my description is understandable.

Greeting  
PerryR98

The double events happen if you store the same event in two different calendars. This is because Google uses different identifiers than Rainlendar's native events and the Google plugin will automatically change that.

If you really want to have the event in two calendars you need to add it first to Google and after that to your local calendar. Enabling the offline file for your Google calendar probably is an easier solution though.
