## draw events in calendar

Posted by meckermaus - 2008/09/25 14:05

---

Hello there!

I'm trying to create a fairly simple skin, just displaying my uni-appointments. I remember the old rainlendar had this option to draw events into the calendar (naturally, it would have to be pretty big for that, but it should work in a horizontal on especially).

I'm having troubles finding that option, but maybe I'm just overlooking something?

Thanks for any pointers.

The current version doesn't support this.
