## How can I change the localization of the database?

Posted by maximoff - 2008/10/06 04:55

---

Hi

I have a little problem. I need to change the localization of the database with all the events and put in another folder and another partition... but I don't know how I can say to the software that it has to search all the data on another folder. I tried also to find file .ini with all the events but there isn't on the folder: C:/program/Rainledar2 and I don't know where it is. I know that you can use portable installation but I don't need to move all the software... only data. Is it possible?

Thanks

Maximoff

Go to Options->Calendars and select the Default calendar (or the one you are using). In the lower area of the dialog you can then edit the filename field to change the location of the ics-file (that's where the events are stored).
