## No 'on desktop' in Linux version?

Posted by scai - 2006/10/29 15:08

---

I am wondering why the 'on desktop' option is unusable in linux version. I can only make it 'on bottom'. This is not that handy. When I press the show desktop button, the rainlendar will be gone and I must refresh to get it back.

Is there a way to make 'on desktop' option available?

I don't know. I've newer done any Linux UI programming before this so I have no idea how to implement it. Does anyone else know about this?
