## I am wondering why the 'on desktop' option is unusable in linux version. I can only make it 'on bottom'. This is not that handy. When I press the show desktop button, the rainlendar will be gone and I must refresh to get it back. Is there a way to make 'on desktop' option available? Re:No \'on desktop\' in Linux version? Posted by Rainy - 2006/10/29 15:44 I don't know. I've newer done any Linux UI programming before this so I have no idea how to implement it. Does anyone else know about this?
