
Minor import bug: event types

Posted by sangfroid - 2006/11/19 02:07

When importing 0.22.1 events into 2.0 (build 27).

Version 0.22 had a "Holiday" event, but v.2 has a "Holidays" event. That is, "Holiday" is unknown and has the "default (blue)" color day rather than the "Holiday (yellow)" color day.

My guess is that what were "Holiday" should be imported as "Holidays"

Currently the importer doesn't change the event profiles but I guess it might be a good idea to change them to match the categories in R2.
