
How to add digiclock (time) into the skin?

Posted by begtognen - 2008/11/01 12:39

Hi there,

I'd really love to add the current time (in digital format) to my skin. I'm working in Windows XP. I'm quite a new user, so even though I read the "time" section of the Help file, I'm not sure where the code would go. Any suggestions would be much appreciated.

Thanks much.

If you just want to have the clock on your desktop you can just enable it from some other skin. If you are creating your own skin and want to include also a digital clock window the easiest way probably is to take a look how it's done e.g. in the Shadow4 skin.
