## Looses events if config change

Posted by tabletguy - 2006/11/19 10:03

---

If I make any changes to configuration, it loses all the events that I have defined.

Ex: Define an event. Then, change start of week from Monday to Sunday. The event disappears. Many other config changes do this also, such as changing whether or not to show the event or todo window when no events are available. Running Windows XP Tablet PC Edition.

Does this happen also with build 27 (available in the beta forum)?
