## IfAboveAction help

Posted by poisonborz - 2008/11/16 16:24

---

Hola, to be honest, this question is for rainmeter, but since script language is the same, I hope it's not a problem to ask :)

I found a gmail-notifier skin, which extracts the info (from rss) in the following form:

```
Measure=Plugin
Plugin=Plugins\WebParser.dll
UpdateRate=#Update#
Url=#Url#
RegExp="(?!siU){fullcount}{.*/fullcount}{.+{title}.+{/title}})"
StringIndex=1
```

Since {fullcount} stores the number of mails, a string can display it like Text="%1 new mail"

What I want to do is to hide this string in case of zero... but how can I measure the value/string index %1?

If I guess right, I have to associate IfBelowValue with the string value with the action below...but how?

```
IfBelowAction=!execute
```

Thanks for everyone in advance

(Edit: whoops, I didn't noticed that html tags have been cut. replaced html tag wraps with {}
