
Lost data with upgrade to version 2.4

Posted by lakeman - 2008/11/19 10:23

I am new to this forum. I just installed version 2.4 free without uninstalling version 2.2 as I was instructed to do. When I opened the new calendar, all the calendar data was missing. How can I restore all the data that was in the older version?

I tried renaming the rainlendar2.ini file as indicated in a previous post, but that did not solve the problem. When you say rename, do you mean rename with the same name? I did that .

Just rename it e.g. to rainlendar2.old or something like that so that Rainlendar cannot find it anymore.
