## Fade all items in pre and post days

Posted by benjam - 2006/11/21 12:00

---

I was looking at my calendar and noticed that event days are not faded in the pre and post days. I was also thinking that, if there are other people out there like me, with tons of events on the calendar, that it would hide the nice fade that you have on the pre and post days in the calendar, ruining the effect.

It would be nice if there were a setting in the xml file, something like...

(note the bold sections)

```
<calendar ... postshowcount="3" postopacity="65" preshowcount="1" preopacity="65">
```

where it would make ALL the items (event colored days, event images, weekend days, regular days, etc) shown in the pre and post days faded, making the actual month stand out even more.

And it could switch back and forth in the normal fashion for the long calendar. i.e.- if its a 'bright' month, show all items will full opacity; if its a 'dim' month, show all items with a 65 opacity (or whatever).

Good idea. I'll see if it can be implemented.
