
Rainlendar 2.4 build 68

Posted by Rainy - 2008/12/07 13:38

Build 68 can be downloaded from here:

Windows: Rainlendar-2.4.b68.zip

Linux TAR (32-bit): Rainlendar-2.4.b68-i386.tar.bz2

Linux DEB (32-bit): rainlendar2-pro_2.4.b68-1_i386.deb

Mac OS X (Intel): Rainlendar-2.4.b68.dmg

This is beta version! It has not been tested.

o Replacing an image element (e.g. with the Photos addon) caused a crash. Fixed.

o Added menu items to hide/show all calendars and windows at once. Windows menu items are available only if tray icon is enabled.

o Rainlendar crashed when importing the old version data on the first run. Fixed.

o Fixed a crash when multiple network calendars were initialized at the same time.

O Calendar and category filters for windows didn't work. Fixed.

Is there going to be a 64 bit version?

I'm on an mac and i'd love to have a menubar icon for Rainlendar (Like Systemtray icon in windows) instead of the dock icon. Is it possible to remove the dock icon or have an option in preferences? That would be awesome! :D

cheers

A menubar icon instead of the dock icon would be really nice indeed!
