## ONLINE CALENDAR ???

Posted by hakefjord - 2006/11/21 17:34

---

Hi! I have a Q about "online calendar" after that I have Rainlendar ".  
What is that..? Is it for check my calendar from another internetdevice? Or?  
How can I make it sync from Rainlendar to outlook.  
I got it sync from Outlook to Rainlendar, PERFEKT!!!

Thanks in advance  
:)

You can use the network calendars e.g. to see your Google calendar events on Rainlendar. Or if you have access to a webdav server you can use it to store the events so you can use them from different computers.

---

The network calendars should support all online calendars that use the iCalendar-format (.ics). I don't know if Hotmail supports it or not.

If you have access to php / webhosting environment, set one up yourself.. ->  
[http://phpcalendar.net/documentation/index.php/Main\\_Page](http://phpcalendar.net/documentation/index.php/Main_Page)

I use combination of webdev and phpcalendar, works a charm
