## Rainmeter and name of day

Posted by Arne Anka - 2008/12/16 09:55

---

Trying some things out in Rainmeter, and have a problem with name of day. It's in english, not localized. How to localize it?

You can try to use the Substitute to change the English days to localized versions.

Yes, that is a way. But IMHO it should get it from the system instead... :(  
Well well, that aint your fault, Rainy. :P

Changed some things and it looks OK, except for the week-number :(  
How and where can I add 1 to correct it?

From [http://msdn.microsoft.com/en-us/library/fe06s4ak\(VS.80\).aspx](http://msdn.microsoft.com/en-us/library/fe06s4ak(VS.80).aspx)  
%W = Week of year as decimal number, with Monday as first day of week (00 - 53)

Yes, why does it start with 0? I've never heard of a week 0. :angry:

Well, I tried to use CALC, but there's something wrong... It's week 1 all of the time now :huh:

It's a bug. The date structure doesn't get filled properly so the week number isn't calculated correctly.

Oh, too bad... :(  
Any workaround or update or anything (well after all, it's x-mas) :lol:
