
Transparency

Hi Rainy

First of all, congratulations on this tremendously useful piece of software. I have successfully modified the Shadow4 skin to suit my needs. But here's one thing I wonder about: is it possible to set the transparency/opacity of an element (e.g. an image) in the XML tag (so it could be controlled by a variable)?

Cheers, Beat

The bitmap and bitmap font have opacity attribute and in theory you could also create a variable for it. The problem is that the variable would be a global and there is no way to change them from the UI.
