## Time difference with network shared calendars

Posted by SlantNGo - 2008/12/21 20:13

---

Is there a way to adjust for time difference with network shared calendars? For example, I subscribe (read-only) to the calendar <webcal://sports.yahoo.com/nfl/teams/cin/ical.ics> but all events show up three hours too early. I presume this is because the events in the calendar are in Pacific time while I am in Eastern time.

At the moment that's not possible. I have plans to add time zone support to Rainlendar but I don't know when that's going to be implemented.

Quick fix for anyone interested: Add the calendar to your Google Calendar account, make it public, then subscribe to the ICS for your Google Calendar. Google appears to automatically correct the time zone to match yours.
