## rainmeter alignment

Posted by bugreporter - 2008/12/24 20:45

---

is there anyway that i can get the "date text" to automatically align to the immediate right.. for eg. in my attached image when the date changes to shorter weekdays like monday the text is slightly moved to the left and i have to manually but it back to the "right edge"..but when it changes to days with long text like saturday it is positioned perfectly at the edge..

so basically i want to know how i can get the text to always be at the immediate right

In the meter, you can use

StringAlign=XXX

where XXX can have the values LEFT, CENTER or RIGHT

Well, you have to change the placement (X= setting) accordingly.
