---

Hi all,

I was wondering if someone could point me in the right direction. Im trying to make a countdown meter for rainmeter. This meter counts down the 168 hours we have in a week. Im trying to keep track of time I waste lol. So far I have this  $168 - (\text{weekday}(\text{date},0) - 1) * 24 + \text{hour}(\text{now})$  and this  $168 - (\text{weekday}(\text{date},0) - 1) * 24 + \text{hour}(\text{now})$  & ":" &  $\text{right}(0 \& 59 - \text{minute}(\text{now}),2)$  & ":" &  $\text{right}(0 \& 60 - \text{second}(\text{now}),2)$ . Where do I go from here.

Thanks,  
Rainlendar2 FTW
