refresh mit outlook
Posted by Gwahil - 2009/01/20 14:24
_____

I have installed the Rainlender new, because I changed from XP hom to XP prof.. Now I can't creat my outlook dates to
Rainlender and I don't know why?
Thanks for the help

_____

So what happens when you try? Are you not able to select the Outlook calendar in Rainlendar or do you get some error
message?

Can you send me (rainy@iki.fi) the Rainlendar's debug log when you try to create a new event to Outlook from
Rainlendar (make sure you run Rainlendar in debug mode). I can check if it contains something which would explain why
it doesn't work.

_____

There is a shortcut called "Debug Rainlendar" in the program folder. Start the application from that and it will be in the
debug mode.

thanks.
I have saved the log file under rainlendar.txt and I have send it to you.
Thanks for your assistance
