
Increasing the width of the window

Posted by Louis - 2009/02/03 15:59

As a complete newbie.... how (and where !) do I increase the with of the window ?

That depends on the skin. If the skin defines the width as a variable you can change it from the advanced skin settings (select the window from the active list and click the settings button). If the width is not in the variables list you would have to edit the skin itself.
