
Changing \"add years to Birthday and Anniversary\"

Posted by Doc - 2009/02/06 09:12

In the categories "birthday" and "Anniversary" I would like to see an option where you can input the current year of age or # of years married so each year that number increments to show the person's current age or what anniversary.....

It's already in there - if you set the startdate to when they where born / married. And use the category Birthday / Anniversary and make it a Yearly recurring event.
