## Struggling with OffsetX and OffsetY

Posted by Kebas - 2009/02/10 10:24

---

Hi all,

I'm struggling with the OffsetX and OffsetY parameters in Rainmeter (ROTATOR). Just don't know enough about how to use these or how to calculate the right values. I tried to figure it out by looking at other ini files, but it stays guessing. Would someone please explain this to me or give me a link?

Thanks in advance,

Greetings,  
Kebas.

<http://www.ipi.fi/~rainy/Rainmeter/Manual.html>

OffsetX and OffsetY change the location of the CENTER of rotation. I'm assuming 0,0 is the center of whatever you're rotating and adding values to it doesn't rotate it, but just if you DO rotate it, the point it rotates around will be shifted by OffsetX and offsetY.
