
editing FontFace parameter

Posted by dthompson - 2009/02/11 09:24

Does anybody know why some fonts work and some don't when changing FontFace parameter in an .ini file? I've tried various .ttf which are indeed in my C:\Windows\Fonts\ folder, but only some work.

Thanks

Is this a topic about Rainmeter?

You should define the font by FullFontName.
In a FileName, probably that it does not work.

e.g.
FontFace="Times New Roman" -> work!
FontFace="TIMES.TTF" -> not work!

Yes

You should define the font by FullFontName.
In a FileName, probably that it does not work.

e.g.
FontFace="Times New Roman" -> work!
FontFace="TIMES.TTF" -> not work!

This is the answer! Thank you!

I have the same problem, but i put the full name and some fonts works and others doesn' work, i don't know why. I see fonts properties and are the same type.
Thanks in advance.

DONE!

I was just (for me) close Rainmeter and restart again (doesn't work if refresh skins)
Bye.

I'm having the same problem. Specifically with ITC Avant Garde Gothic LT Medium Caps. Anyone else have problems with this font?

Yeah, multiple times. Could someone try and see if they can use the font if they have it? I would like to know if its just me or if other people have the same problem.

It seems that all the fonts cannot be used.

For example, in my case, OTF(OpenType) cannot be displayed.

Probably, the font which can be used by Rainmeter is almost the same as the font which can be setup by Internet Explorer.
