
Railendar 2.0 & Outlook

Posted by bepyland - 2006/11/24 20:12

Hi all,
i have some problem with Rainlendar and Outlook.

Rainlendar take all the appintment from my outlook but don't take the category that i insert in outlook.

I cannot find in the option nothing for this, can you help me? :D

I use an outlook 2003 in italian (and rainlendar 2 too).

I am also having problems with Outlook. I have added it as a calendar, but nothing is getting pulled in. It does work in 0.22.1. It may be because my Outlook client interacts with an Oracle calendar server using "Oracle connector for outlook".

I am attaching my log file from starting with the --debug option.

Well, if the old version worked the new one should work too. Could you contact me privately (rainy@iki.fi). I can try to create few test builds for you with some added logging information.
