I tried also with RSS news with the proxy and the debug log is:

```
DEBUG: (00:01:35.266) Refreshing (Name: "HUD.Vision\White\RSSReader" Ini: "RSSReader.ini")
DEBUG: (00:01:35.485) WebParser: Fetching URL: http://www.releaseinfo.net/ri/rss.php
DEBUG: (00:01:35.610) WebParser: Finished URL: http://www.releaseinfo.net/ri/rss.php
DEBUG: (00:01:35.610) WebParser: Matching error! (-1)
```

What means it ??

Thanks,
Massimo

It means that the reg exp didn't match with the data that was read from the web page. You can use the Debug keyword to display the data the server returns. Note that some servers might have flood protection so they might return error if you poll them too often.

Hello

The text included is from log file with DEBUG enabled

If I set my proxy in the form xx.xx.xx.xx:yy in internet explorer I can see what I want in rainmeter. If I set the same proxy only in web parser And left IE without proxy I can't see nothing because I'm behind Websense.

Thanks if you could help me.

Ciao,
Massimo
