## help needed on webparser regex

Posted by gschoppe - 2009/03/06 22:08

---

I'm trying to grab sun up and sun down times from almanac.com, but regular expressions not something I'm very good at... i currently have:

```
Measure=Plugin
Plugin=Plugins\WebParser.dll
Debug=2
URL=http://www.almanac.com/rise/results.php?what=Sun&zipcode=05819&place=&state=&searchtype=zip
RegExp="(?!siU)Sun (.*) (.*)"
StringIndex=2
UpdateRate=3600
```

I know somethings wrong, but I can't figure it out...

help?

edit:

code isn't working right, so i attached my test ini... its based on enigma's location ini

---

Try this code.

<http://www.rainlendar.net/cms/images/fbfiles/files/example-22a536291225ef51aa8bb52053a78c4f.ini>

NOTICE!!

WebParser.dll does not work to URL containing

So, you should choose suitable URL.

thank you, you are truly my hero... this explains a lot that I didn't get...

is there anywhere that I can get an overview of rainmeter Regular Expressions? I know they are Perl Regex format, but I can't seem to find just a straight glossary/dictionary sort of listing
