
Rainlendar 2.5 build 73

Posted by Rainy - 2009/03/08 06:50

Build 73 can be downloaded from here:

Windows: Rainlendar-2.5.b73.zip

Linux TAR (32-bit): Rainlendar-2.5.b73-i386.tar.bz2

Linux DEB (32-bit): rainlendar2-pro_2.5.b73-1_i386.deb

Linux TAR (64-bit): Rainlendar-2.5.b73-amd64.tar.bz2

Linux DEB (64-bit): rainlendar2-pro_2.5.b73-1_amd64.deb

Mac OS X (Intel): Rainlendar-2.5.b73.dmg

This is beta version! It has not been tested.

The Shadow4 skin has been changed so if you are using the widget or language addon you need to use these versions:

<http://www.rainlendar.net/download/1.4/Shadow4-Widgets.r2skin-addon>

<http://www.rainlendar.net/download/1.4/Shadow4-Languages.r2skin-addon>

If you want to know what kind of strings the QuickAdd can parse here's a wiki page about it: [QuickAdd](#)

Changes:

- o Images with incorrect dimensions just give an error in the log but don't prevent them to be used.
- o Added support for color definitions in the xml skin. Colors can be adjusted with hsv, brightness and contrast like bitmaps.
- o The # is now automatically removed from the time item's format string on Mac.
- o Added possibility to have edit controls in the xml format skins.
- o Added new window for Shadow4 skin for quick add events/tasks. In Chromophore the same functionality is embedded to the lists.
- o The Rainlendar's context menu has all the items now in Mac too.
- o Skins and languages are installed to the config folder instead to the program folder.
- O Snoozing alarm hid some of the other alarms from the window too. Fixed.

Great, thx! :D

But on MacOSX, after some time the menubar-icon jumps to the most left place in the menubar.

And it would be pretty cool and useful if there were buttons for import and export in the manager-window. If you only have the menubar-icon and no dock-icon, you don't have access to the file menu and according to this no access to import and export...

Me again :P

The menubar-icon is 1px to high. I corrected and attached it. Feel free to use it in the next release ;)

Yes, I need to figure out some way to access the menus on Mac if the dock icon is disabled. Thanks for the updated tray icon.
