## next and previous buttons for RSS feed.

Posted by periferral - 2009/03/09 16:21

---

I'm trying to create something where I show 1 RSS feed. However, on click on a left button, I want the previous RSS feed to be shown. On click right, I want the next RSS feed to be shown.

I can create something like this

```
hidden=0
x=100
y=100
```

```
hidden=1
x=100
y=100
```

```
hidden=1
x=100
y=100
```

LeftMouseDownAction=!Execute

However, the problem is the current and next., Is there a way to know what the current meter is. For example, current meter is (feed + \$current, where \$current=1 and so meter is feed1). So next is (\$current++, so feed is feed2).

Is this possible?

It might not be the most efficient, but you could create x number of buttons for each RSS feed you wanted to show and have the mouse down event of each meter hide the current button and show the next one. It's not pretty but it'd work.
