
How do I set a desktop clock?

Posted by Zachh22 - 2009/03/09 22:12

I've asked this question on many different boards but never got an answer, hopefully I'll get one here.

I just have a simple large clock config for Rainmeter installed, but I just have no idea how to set the damn clock. All I need to know is what I have to do this code to set the clock to the correct time.

Help be much appreciated .

The time is read from the operating system so you need to change the time from there. In Windows that can be done from the Date And Time Properties in Control Panel.
