
Scaling images with respect to ratio

Posted by rotegirte - 2009/03/11 00:38

Is there a way to resize images, but preserving their original ratio?

Since I don't know the orientation of my images in advance, fixed H/W settings would distort the images... Most comfortable would be a percentual size setting, or "max" H/W settings, but I couldn't find anything on that matter.

doesn't look like it does. I thought if you specify width and no height, it would scale accordingly but it just spits out the original size and ignores width.

Currently the image meter scales the image to the given size. I added the feature to keep the aspect ratio to the Rainmeter's issue tracker.
