
Help: Rainmeter lagging?

Posted by Brood_Star - 2009/03/14 10:51

As stated in topic title, rainmeter lags me. Everything works fine until some values need to be constantly updated (eg a clock, system values like cpu/network) and then it just lags to move the widget or even go through rainmeters menu by right-clicking

It wasn't like this before... anyone have any clues on how to solve?

I have the same issue. As soon as I add any updated config I get an heavy lag. Also appears with the builtin configs. Also the interface for rainmeter gets VERY slow, only updated every 2-3 seconds.

I had it running smoothly before and suddenly it started behaving strangely...have no clue why.
