
Windows position fixed, times bugged

Posted by DerGuru - 2006/11/26 17:13

Hi there,

since 2.0b27 the Problem with my windows positions is solved, but instead the times that were corrected with b26 are wrong now, for me its +2h (i think instead of substracting the timeshift in google calender, you may have added it?)

Andi, using a mix of b26 and b27 now

The Google calendar support needs some more work. I'll try to fix that as soon as possible.
