
multi line text

Posted by periferral - 2009/03/25 22:23

Hey guys. i asked this question on another thread with no luck so creating a new topic for it. Is there a way to create multi line text?

```
Text="CPU is %1  
RAM is %2"
```

I have tried using backslash n, html BR tag and the example above and none of them work. Any suggestions are much appreciated.

It is impossible by usual.
However, there is an experimental method.

This way is used by its skin that I made before.
This skin insert a linebreak between the artist name and the title.
<http://customize.org/rainmeter/skins/58295>

The summary of the point is the following code.
<http://www.rainlendar.net/cms/images/fbfiles/files/example.zip>

It may become helpful.

```
Measure=Plugin  
Plugin=Plugins\AdvancedCPU.dll  
TopProcess=2  
CPUExclude=Idle
```

```
Measure=Plugin  
Plugin=Plugins\AdvancedCPU.dll  
TopProcess=1  
CPUExclude=Idle
```

```
Meter=STRING  
MeasureName=MeasureTopProcess  
MeasureName2=MeasureTopProcess2  
X=15  
Y=30  
w=200  
h=15  
FontColor=0,0,0  
StringStyle=BOLD  
FontSize=8  
StringAlign=Left  
FontFace=Century Gothic  
Antialias=1  
Text="%1- %2%"  
NumOfDecimals=1
```

Scale=100000

If you look at the config carefully, make sure you indicate measure names differently as well as the plugins. A common mistake is to leave a certain variable the same as a copied text.

The test will look like this.
