
ClearType Issue

Posted by konrad - 2006/11/27 11:42

Hi there!

As the realease notes state now, ClearType was disabled from Rainlendar's windows.

Is there an option to re-enable it?

Because, everytime RL refreshes (which can be rather often on a networked calendar), ClearType is turned on and off and on and off ... for all of my screens! Every cycle is taking about one second. This is quite annoying, if you have a lot of text on screen.

I was not really unhappy with RL in 2.0.0: As I used another font than originally in the skin, blur was not so much an issue.

Regards, Konrad

I have also had this error. When the calendar is loading the network calendar events, it turns the ClearType on my entire desktop on/off multiple times. This also occurs when I hover over a date on the calendar.

Get build 29.
