## Daylight Savings Time

Posted by BLueSS - 2006/10/30 00:17

---

Daylight Savings just changed (-1 hour) in my timezone and Rainlendar did not adjust the time properly.

I tried the Advanced setting of Daylight Savings on both disabled or enabled, but imported ICS calendars shows ALL times an hour early on both settings.

BUT - When I set the time format Manually (%I:%M) It showed the right time again... ;)

I have also encountered this area. I'm in Central Standard and DST just hit last weekend, but everything displays an hour earlier. Using the previously mentioned time format change did fix things, but just want to pipe in that I had the same error.

I love this program!
