It is possible if you use Web UI.

1. Set up uTorrent as below.  
[http://www.rainlendar.net/cms/images/fbfiles/images/web\\_ui.png](http://www.rainlendar.net/cms/images/fbfiles/images/web_ui.png)

2. Extract data from dumped file useing Webparser.dll.

Example code:

Set up the same user and password as Web UI in .  
<http://www.rainlendar.net/cms/images/fbfiles/files/torrent.ini>

Result:

<http://www.rainlendar.net/cms/images/fbfiles/images/sample.png>

im trying to configure this so that I can use web ui with utorrent for the 1st time.

question 1: After you configure does the web ui show up on your windows desktop rather than a web page in your browser? sorry im a newbie..

question 2: How do I set this up so if this does go on desktop which I want and I can be able to use it on my desktop.

Things already done:

Configed Web Ui with my settings (username,pw and IP) It works now, but only in my webbrower that I set it up in.

How do I get it to show up on my desktop? do I need to download anything else? I seen a skin that I like how can I be able to use that?
