
Proxy authentication support for Rainmeter

Posted by Rain_User - 2009/04/14 14:03

Dear All,

I am desperately seeking for proxy authentication support for the webparser. I have been looking for days in the internet but with no success. If someone has an idea how to do it, I would be very grateful.

In the help documentation, the author says "The plugin doesn't support any authentication so it's possible to use only servers that does not require it or you need a some different way to authenticate yourself to the proxy server.", so could you please give me an advice, which "different way" I could take?

I have also noticed, that the latest version available on <http://code.google.com/p/rainmeter/downloads/list> will take the proxy setting from IE (webparser refreshes each time proxy setting changed), but it still fails to parse since the proxy requires authentication.

Please help. Most of the time, I am sitting in my company office behind a proxy. If I am not able to use Rainmeter in the office, I cannot use it at all.

Thanks in advance.
