## Mouse over not working

Posted by dkump - 2009/04/14 16:19

---

Mouse-over tooltips are not working for me. It doesn't work for both my calendar events or to do list items. I checked "show tooltips" is set to yes. The tooltip format is set to "Rainlendar", but I can't find any documentation that suggests that's a valid setting. I assume that's the default because I don't remember changing it. Other tooltips in Windows are working. I can figure out which Rainlendar setting would be causing this. Any suggestions? Thanks.

Are you using the default skin? If not, check from the advanced skin settings (options->skins, click the "Advanced >>>" button) that the skin contains a tooltip window.

I figured out my problem. In Options->Skins, didn't have the tooltip moved from available to active skins. I saw Tooltip in the active tree, but there was nothing under it. I moved the skin to active and now it's working. Your suggestion made me stumble onto it. Thanks.
