
How do I make it count?

Posted by Meronpan - 2009/04/20 16:37

I don't know ANYTHING about scripting, but still, I really want one of my Skins to be able to count. I read that this can be done with RecycleManager.

I have an External Hard Disk Drive with a map called 'Anime' that is filled with over 140 anime series. I would like the skin to be able to count the following:

- Count amount of total folders inside Anime folder.
- Count amount of total episodes present inside total folders in Anime folder.

Please help!

I don't know the answer, but you might want to try checking the lua manual: <http://www.lua.org/manual/5.1/>

This may be a roundabout way, but one possibility would be to execute a directory read instruction (dir if Windows, ls if Linux), redirect the output to a file, then count the entries in a file.
