
Show Buttons

Posted by dansx6 - 2006/11/28 22:41

I added buttons to my skin to go to previous months or future months and to toggle the event window, to list and the digital clock. Is there any way to set up the "Show Buttons" in the Calendar settings so that individual buttons can be shown or hidden? The way it is set now if the show buttons setting hides them all.

You can create a separate variables for the different buttons. Just define the new variables in the skin.xml and use them in your button definitions instead of the %Show_buttons%.
